SN54LS07, SN74LS07, SN74LS17 HEX BUFFERS/DRIVERS WITH OPEN-COLLECTOR HIGH-VOLTAGE OUTPUTS SDLS021B - MAY 1990 - REVISED JANUARY 2002

- Convert TTL Voltage Levels to MOS Levels
- High Sink-Current Capability
- Input Clamping Diodes Simplify System Design
- Open-Collector Driver for Indicator Lamps and Relays

description

These hex buffers/drivers feature high-voltage open-collector outputs to interface with high-level circuits or for driving high-current loads. They are also characterized for use as buffers for driving TTL inputs. The 'LS07 devices have a rated output voltage of 30 V, and the SN74LS17 has a rated output voltage of 15 V. The maximum sink current is 30 mA for the SN54LS07 and 40 mA for the SN74LS07 and SN74LS17.

SN54LS07 J PACKAGE
SN74LS07, SN74LS17 D, DB, N, OR NS PACKAGE

These circuits are compatible with most TTL families. Inputs are diode-clamped to minimize transmission-line effects, which simplifies design. Typical power dissipation is 140 mW and average propagation delay time is 12 ns.

TA	PACI	KAGE [†]	ORDERABLE PART NUMBER	TOP-SIDE MARKING				
0°C to 70°C	SOIC – D	Tube	SN74LS07D	LS07				
		Tape and reel	SN74LS07DR	L307				
	SOIC – DB	Tape and reel	SN74LS07DBR	LS07

Output voltage, V_{Ω} (see Notes 1 and 2): SN54		
	4LS17	
Package thermal impedance, θ_{JA} (see Note 3):	: D package	86°C/W
	DB package	96°C/W
	N package	80°C/W
	NS package	
Storage temperature range,T _{stg}		. −65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values are with respect to GND.

2. This is the maximum voltage that should be applied to any output when it is in the off state.

3. The package thermal impedance is calculated in accordance with JESD 51-7.

recommended operating conditions

			SN54LS07			SN74LS07 SN74LS17			UNIT
			MIN	NOM	MAX	MIN	NOM	MAX	
VCC	Supply voltage		4.5	5	5.5	4.75	5	5.25	V

PARAMETER MEASUREMENT INFORMATION

- Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- D. S1 and S2 are closed for tPLH, tPHL, tPHZ, and tPLZ; S1 is open and S2 is closed for tPZH; S1 is closed and S2 is open for tPZL.
- E. Phase relationships between inputs and outputs have been chosen arbitrarily for these examples.
- F. All input pulses are supplied by generators having the following characteristics: PRR \leq 1 MHz, Z_O \approx 50 Ω , t_f \leq 1.5 ns, t_f \leq 2.6 ns.
- G. The outputs are measured one at a time with one input transition per measurement.
